

Andrey Shluinsky

Intragenetic typology and serial verb constructions in Kwa as a case study

Outline

- “Theory”: methodological issues of intragenetic typology
- “Practice”: some patterns of serial verb constructions in Kwa
- General perspective

Intragenetic typology

Linguistic (extragenetic) typology

- Generalization over linguistic diversity as a whole
- Genealogical and geographical relationship between languages is not relevant
 - a language sample
 - a balanced language sample
- Results of a study refer to the general population of the languages of the world / Human Language

Intragenetic typology / Microtypology

- genealogical relationship is relevant
- comparing genealogically related languages not aiming at a protolanguage reconstruction
- no direct evidence for properties of the whole population of languages
- evidence for properties of a language family / language group
- in fact, always typical for studies of particular language groups or families, but now as a part of linguistic typology
- a general trend of crossing the borders of typology

Cf. Areal typology

- geographical relationship is relevant
- comparing geographically related languages
- no direct evidence for properties of the population
- evidence for properties of a linguistic area
- in fact, always typical for studies of particular areas, but now as a part of linguistic typology
- not always so easily distinguishable from intragenetic typology

Intragenetic typology

- a response to the problem of overlooking actual linguistic diversity:
 - extragenetic linguistic typology is always based on a relatively small language sample (even if this is a sample of hundreds of languages)
 - “by chance”, the sample typically includes more or less the same representatives of a genealogical unity (the languages with the most detailed accessible data)
 - diversity of the genealogical unity itself is not taken into account

Intragenetic typology

Aleksandr Kibrik (1939-2012)

2nd Conference on Typology and Grammar for Young Scholars, 2005, St. Petersburg

It is clear that these properties of linguistic phenomena influence the strategies for selecting a representative sample needed in a typological investigation. The investigation of certain phenomena in a typological perspective crucially demands reference to languages from a variety of areas and genetic groupings, otherwise we expect trivial or degenerate generalizations. At the same time, many parameters may be successfully investigated within the limits of a single linguistic family. It is the latter case that will be discussed below.

It is the diverse rather than the stable parameters which are most favourable for typological investigation within related languages, as it is more likely that related languages have not preserved the original status of the protolanguage, but rather show various stages of its variation.

(Kibrik 1998: 64)

Intragenetic typology

Kibrik (1993, 1998, 2003):

Parameters for which intragenetic typology is favorable:

- Diachronic instability
 - diversity inside a genealogical unity
- (Relative) rarity and representedness in a specific language family
- Complexity
- Scalar continuum

Intragenetic typology

In other words:

Complex, rare and unstable parameters are to be compared in genealogically related languages, similar to one another, not in an abstract sample

Cf. Greenberg (1978: 83)

The value of the intragenetic method is that given a common base, we have the closest that we can get to a laboratory situation. History manipulates our variables.

Methodological issues

For typology:

- Possibility at all
 - Can so different languages be adequately compared?
- Language population
- Language sample
- Explaining similarities
- Explanatory power of the result of a taxonomic comparative study

Possibility at all

Extragenetic typology:

- at all (cf. comparability, Evans 2020)
- what parts of the language system
- comparative concepts

Intragenetic typology:

- never justified
- but never doubted
- taken for granted in its traditional form
 - e.g. Slavic studies

Population

- extragenetic typology: all the existing and documented extinct languages;
- intragenetic typology: all the languages (lects?!) of the genealogical unity
 - genealogical unity is expected to be more or less well-established
 - genealogical unity is not too deep
 - details of internal genealogical classification are not relevant
 - taking into account only clear low-level subgroups
 - typological homo-/heterogeneity of the genealogical unity is relevant

Sample

- Extragenetic typology:
 - (genealogical) independency (probability) strategy (Perkins 1989) – 1 representative per language family
 - areal independency
 - variety strategy (Rijkhoff & Bakker 1998) – including rare types
 - random sample
 - “maximum coverage” sample: including as many languages as one can
- Intragenetic typology?

Sample

- All the languages of the genealogical unity? Dialects, subdialects...
 - Data accessibility problem: is there a family where all the dialects of all the languages are perfectly documented?
- ⇒ Intragenetic typology also needs sampling, BUT the ratio of the sample and the population is different

Sample

- Independency sample with a different scaling – e.g. 1 dialect per language (cf. Kibrik 1979-1981)
- Variety sample – including more languages with structural variation (of the parameter in focus) (cf. Konoshenko 2014)
- “Maximum coverage” sample
 - doing as much as one can in hope to include all the genealogical unity
 - more right to exist in intragenetic typology
- Anyway, a sample should be declared explicitly

Differences and similarities

- Differences between related languages are of interest on their own
- Still, dealing with clusters based in similarity
- Extragenetic typology: clusters are linguistic types that should be explained by general factors
- Intragenetic typology: similarities may have different explanations

Similarities

- Common inheritance from the protolanguage
- Contact-induced
 - Genealogically related languages are spoken in the same area
 - Interference is easier between related languages
- Typological similarity as a result of independent evolution
 - Initially similar languages have prerequisites for limited variation in their evolution

Distinguishing the three options is not so trivial in the case of intragenetic typology.

Explanatory power

- Typology deals with universals or strong trends that say something about the human language in general
- Extragenetic typology does it directly, as it is based on a sample from the population of all the linguistic diversity
- Intragenetic typology can make claims on the population of the genealogical unity
 - But such claims have no interest for typology
- Extrapolation on the protolanguage and on the process of evolution
- Other ways to work for typology in general

Explanatory power

- Intragenetic typology as a pilot typology of languages with specific structural features (cf. rarity of the parameter in focus)
- Explaining intragenetic tendencies of individual features through many more general universal factors
 - The task of distinguishing what is influenced by universal factors and what is influenced by specific peculiarities of the genealogical unity in focus

Serial verb constructions in Kwa

Serial verb constructions (SVCs)

Akan (Twi)

Araba tɔ-ɔ nam kyew-w

Araba buy-PST fish fry-PST

‘Araba bought fish and fried it.’ (Osam 1994a: 17)

- Two (or more) finite verbs
- A single clause / a common subject
- A single (macro)event
- Sharing TAM and negation
- Widely discussed (Aikhenvald 2006, Haspelmath 2016 among others)

Kwa (West Africa)

- Niger-Congo
 - Benue-Kwa
 - Kwa

- SVO, accusative, no overt nom/acc case marking, typically neutral ditransitives, poor non-finite forms
- About 80 languages
 - For 28 of them I have got accessible data for the study

Kwa: classification & sampling

- “Old Kwa” > “New Kwa” since Bennett & Sterk (1977)
 - No further significant discussion of this genealogical unity, although e.g. the Gbe group is disputable as a part of Kwa
 - Taken for granted in a typological study
- Internal classification is disputable, the most popular now being the “cautious” one by Blench (2009)

Kwa: classification & sampling

Low-level Kwa classification:

- Avatime-Nyangbo
- Gbe
- Kebu-Animere
- Kposo-Ahlo-Bowili
- Abé
- Adioukrou
- Attié
- Avikam-Alladian
- Ga-Dangme
- Lelemi-Likpe
- Logba
- Central Tano
 - Akan
 - Bia
- Guang
 - North Guang
 - South Guang

Kwa: classification & sampling

- The parameter is present throughout the family
 - No reason for variation sample
- Accessibility of data does not correlate even with clear low-level genealogical unities
 - No chance for independency sample

Kwa: classification & sampling

- => “maximun coverage” sample as the only accessible option
- Details presented in accessible data are not the same for all languages
- If I do not take into account languages with low-detailed data, my sample would be too poor
 - In fact, a different sample for every particular part of the study
 - No sense in making any quantitative claims

Language	Genetic affiliation	(Main) area	Data sources
Avatime	Avatime-Nyangbo	SE Ghana	Funke (1909); van Putten (2009, 2014)

Kwa: sample

Methodological issues

- Comparing a parameter of Kwa SVCs
- In the languages of the sample where the data are accessible on this parameter
- Comparing results with low-level genealogical affiliation of the language
- Comparing results with geographical position of the language

SVCs in Kwa

- Relatively rare parameter (not all language families have widespread SVCs)
- Widespread throughout the family (in a sense, is its hallmark)
- Other relevant parameters are fixed (such as word order)
- A number of typical functions in addition to purely lexical SVCs

SVCs in Kwa

- Lexical

Ewe

dɛvi la tso dzo

child DEF stand leave

‘The child stood up and left.’

- Idiomatic

Ewe

e-dɔ alɔ̃ tra

3SG.S-sleep sleep get.lost

‘He overslept [lit., he slept got lost].’ (Westermann 1907: 96)

SVCs in Kwa

- Grammaticalized

Ewe

me-trɔ du akɔdu

1SG.S-turn eat banana

‘I ate a banana again.’

- Especially, take-SVCs and give-SVCs

Ewe

a. *nyɔnu la tsɔ awu yi la do*

woman DEF take dress white DEF put.on

‘The woman put on the white dress.’

b. *ɲutsu la dzra xɔ la na amedzro la*

man DEF sell house DEF give stranger DEF

‘The man sold the house to the stranger.’

Parameters in focus

- Structural issues:
 - **Expressing subject**
 - Expressing TAM
 - **Expressing negation**
- Uses:
 - **Take-SVCs**
 - Give-SVCs

Expressing subject

- Single expression of subject:

Abé

Alate šu mɔɔ nɔ̃

Alate pour drink drink

‘Alate poured the drink (and) drank it.’ (Gbery 1987: 142)

Ikposo

á-mì àwó kó nɔ̃

3SG.PFV-sew dress give 1SG

‘She has sewn a dress for me.’ (Eklo 1987: 125)

Expressing subject

- Single expression of subject, but multiple subject cross-reference

Akebu

tìè-yā *lā-só* *fūé-yá* *lō-kūj* *nòó* *nùj*
woman-CL 3.PFV-pound fufu-CL 3.PFV-give 3.POSS husband
'The woman has pounded fufu for her husband.'

Expressing subject

- Multiple subject

Nzema

ɔ-va-li *kolonvia* *ɔ-man-li* *ɔ-kan'*

3SG-take-PST egg 3SG-give-PST 3SG-son

'He gave an egg to his son.' (Welman 1926: 91)

Expressing subject

- Variation of single and multiple subject

Baule

a. *ɔ̃ fā-lì tānní ɔ̃ mān-nī Kuàjō*

3SG take-PST cloth 3SG give-PST Kuadio

‘He has given cloth to Kuadio.’ (Creissels & Kouadio N’Guessan 1977:419)

b. *ɔ̃ fā-lì tānní mān-nī Kuàjō*

3SG take-PST cloth give-PST Kuadio

‘He has given cloth to Kuadio.’ (Creissels & Kouadio N’Guessan 1977: 421)

Expressing subject

- Single / multiple subject depending on TAM

Tuwuli

a. *okpete a aa-pi bakobi ε-ba*

dog DEF FUT-catch chick.PL 3SG-chew

‘The dog will catch chicks and eat them.’ (Harley 2005: 434)

b. *okpete a a-pi bakobi ka-ba*

dog DEF PRS.IPFV-catch chick.PL IPFV-chew

‘The dog catches chicks and eats them.’ (Harley 2005: 434)

Expressing subject

Type of subject expression	Language	Genetic affiliation	(Main) area
Single subject	Avatime	Avatime-Nyangbo	SE Ghana
	Ewe	Gbe	SE Ghana
	Fon	Gbe	Central Benin
	Gen	Gbe	SE coast of Togo
	Gun	Gbe	SE Benin

	Attié	Attié	SW Côte d'Ivoire
	Avikam	Avikam-Alladian	Southern Côte d'Ivoire
	Dangme	Ga-Dangme	SE Ghana
	Logba	Logba	SE Ghana
	Gonja	Guang > South Guang	Central Ghana
	Nawuri	Guang > South Guang	Western Ghana
	Awutu	Guang > South Guang	Southern Ghana
	Anufo	Central Tano > Bia	NW Ghana
	Twi Akan	Central Tano > Akan	Central, Southern, and SE Ghana >
	Single subject with multiple subject cross-reference	Lelemi	Lelemi-Likpe
Akebu		Kebu-Animere	Central Togo
Tafi		Avatime-Nyangbo	SE Ghana
Multiple subject	Nzema	Central Tano > Bia	SW coast of Ghana
Variation of single and multiple subject	Fante Akan	Central Tano > Akan	Central, Southern, and SE Ghana
	Ga	Ga-Dangme	SE Ghana
	Anyin	Central Tano > Bia	Western and SW Côte d'Ivoire
	Baule	Central Tano > Bia	SW Côte d'Ivoire
Single or multiple subject depending on TAM	Tuwuli	Kposo-Ahlo-Bowili	Western Ghana
	Chumburung	Guang > North Guang	Western Ghana

Expressing subject

Type of subject expression

Single subject with multiple subject cross-reference

Language

Lelemi
Akebu
Tafi

Genetic affiliation

Lelemi-Likpe
Kebu-Animere
Avatime-Nyangbo

(Main) area

SE Ghana
Central Togo
SE Ghana

Expressing subject

Type of subject expression

Single or multiple subject depending on TAM

Language

Tuwuli
Chumburung

Genetic affiliation

Kposo-Ahlo-Bowili
Guang > North Guang

(Main) area

Western Ghana
Western Ghana

Expressing subject

- A significant variation (in fact, no logical possibilities not attested)
- No correlation of rare possibilities both with genealogical and areal factors
 - Even when languages belong roughly to the same area, they are not closest neighbours
- Tentatively, an example of a purely typological similarity driven by an independent evolution

Expressing negation

- Symmetric

Lelemi

Kòfi ú-té-ye lɛna ú-tá-ku

Kofi 3SG.PST-NEG-buy meat 3SG.PST-NEG-chew

‘Kofi didn’t buy any meat and eat it.’ (Allan 1973: 381)

- Zero

Logba

mɛ-é-gɔ m-mua dovu e-tsí

NEG-3PL-grind CL-flour pour.out CL-ground

‘One does not grind flour and pour it on the ground.’ (Dorvlo 2008: 295)

Expressing negation

- Frame

Ewe

Kofi me-fle agbalẽ na Ama o

Kofi NEG-buy paper give Ama NEG

‘Kofi did not buy a book for Ama.’

- Consecutive

Akebu

nòò-fú kēēfī-wā ñ-kùṅ má à-nàtā-tá-pá

1SG.PFV.NEG-buy food-CL 1SG.SBJV-give 1SG.POSS CL-house-ADJ-CL

‘I did not buy foodstuff for my family.’

Expressing negation

Type of negation marking	Language	Genetic affiliation	(Main) area
Zero	Avatime	Avatime-Nyangbo	SE Ghana
	Tafi	Avatime-Nyangbo	SE Ghana
	Fon	Gbe	Central Benin
	Aja	Gbe	SE Benin
	Logba	Logba	SE Ghana
	Chumburung	Guang > North Guang	Western Ghana
	Nawuri	Guang > South Guang	Western Ghana
Symmetric	Adioukrou	Adioukrou	Southern Côte d'Ivoire
	Lelemi	Lelemi-Likpe	SE Ghana
	Akan	Central Tano > Akan	Central, Southern, and SE Ghana
	Baule	Central Tano > Bia	SW Côte d'Ivoire
Frame	Ewe	Gbe	SE Ghana
Consecutive	Akebu	Kebu-Animere	Central Togo

Expressing negation

- Correlation of the two main strategies with genealogical affiliation
- More rare strategies are individual features of separate languages
- No cases of typological similarity so far, dealing with single cases of language evolution
- This does **not** mean that it is always the case of expressing negation in SVCs and even in Kwa SVCs

Take-SVCs

Lative vs. Instrumental vs. Objectal

Gen

a. *Ayí sọ agban-a vá asíme*

Ayi take package-DEF come market

‘Ayi brought the package to market.’ (Lewis 1992: 110)

b. *amejro-á sọ klo gban kpé-á*

stranger-DEF take knee break stone-DEF

‘The stranger used his knee to break the rock.’ (Lewis 1992: 138)

c. *Ayí sọ wómá-á ṣlọ*

Ayi take book-DEF write

‘Ayi wrote the book.’ (Lewis 1992: 143)

Lative take-SVCs

- With inanimate objects

Baule

ɔ̄ fā-lì dwō bà-lì

3SG take-PST yam come-PST

‘He has brought yam.’ (Kouadio N’Guessan 2000: 83)

- With animate objects

Igo

ù-tū úbī l̄ wā nì-à

3SG-take.PFV child DEF come.PFV with-3SG

‘He has taken the child along.’ (Gblem 1995: 190)

Lative take-SVCs

Uses of lative take SVCs		Language	Genetic affiliation	(Main) area
with animates	with inanimates			
-	-	Lelemi Chumburung	Lelemi-Likpe Guang > North Guang	SE Ghana Western Ghana
-	+	Avatime Tafi Ewe Gen Aja Abé Attié Logba Anufo Baule Nzema Gonja	Avatime-Nyangbo Avatime-Nyangbo Gbe Gbe Gbe Abé Attié Logba Central Tano > Bia Central Tano > Bia Central Tano > Bia Guang > South Guang	SE Ghana SE Ghana SE Ghana SE coast of Togo SE Benin SW Côte d'Ivoire SW Côte d'Ivoire SE Ghana NW Ghana SW Côte d'Ivoire SW coast of Ghana Central Ghana
+	+	Nawuri Fon Akebu Igo Ikposo Ga Akan Anyin	Guang > South Guang Gbe Kebu-Animere Kposo-Ahlo-Bowili Kposo-Ahlo-Bowili Ga-Dangme Central Tano > Akan Central Tano > Bia	Western Ghana Central Benin Central Togo Central Togo Central Togo SE Ghana Central, Southern, and SE Ghana Western and SW Côte d'Ivoire

Lative take-SVCs

- Inanimates < animates
- No correlation with areal factors
- No total correlation with genealogical factors
- Example of a purely typological similarity driven by an independent evolution
- The pattern of lative SVCs seems to be areal and/or genealogical
- The expansion from inanimate objects to animate objects seems to be a universal pattern of lative constructions

Instrumental take-SVCs

- Instrument proper

Nawuri

è tá k̀pát̃fà ɲé éjù

3SG take axe chop tree

‘He felled the tree with an axe.’ (Sherwood 1982: 229)

- Manner

Abé

Ako bə aêhɔ́ baba tomobi-nə jɛ

Ako take cleverness repair car-DEF nice

‘Ako repaired the car cleverly.’ (Gbery 1987: 140)

Instrumental take-SVCs

- Consumable

Gen

Ayí sɔ́ atí tu xɔ

Ayi take wood build house

‘Ayi built a house with wood.’ (Lewis 1992: 128)

- Comitative

Akan (Twi)

ɔ-de ne n-nipa foro bepɔw

3SG.S-< take 3SG.POSS PL-person ascend.CONT mountain

‘He ascends a mountain with his men.’ (Christaller 1875: 71)

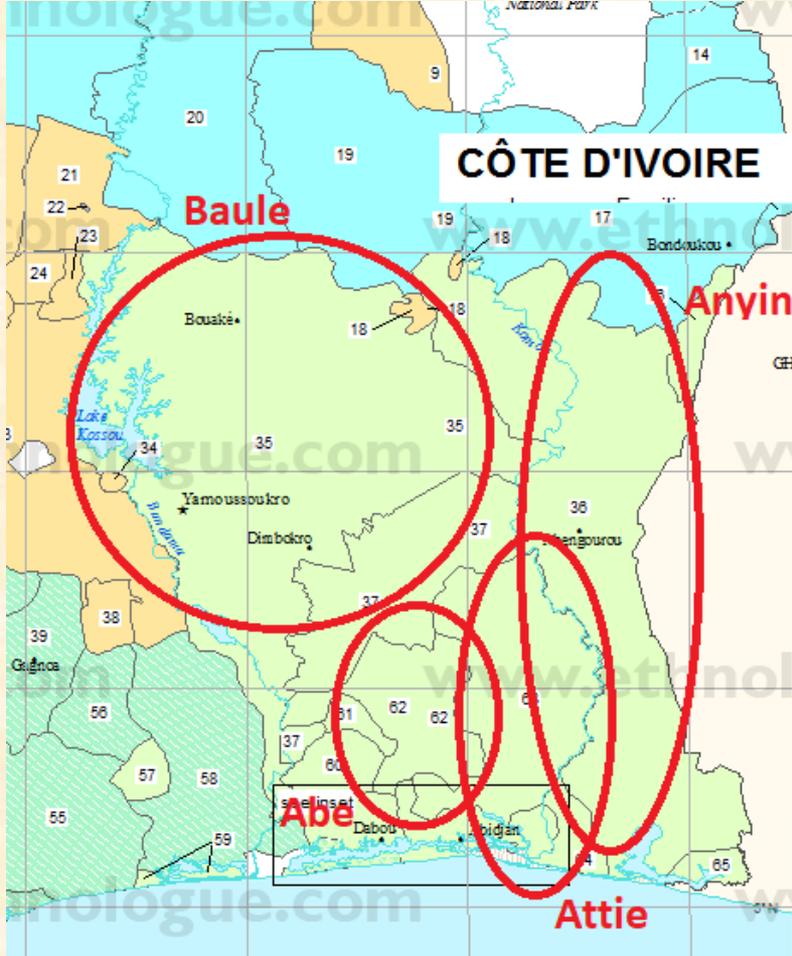

Instrumental take-SVCs

Uses of instrumental take SVCs				Language	Genetic affiliation	(Main) area
instrument	manner	consumable	comitative			
+	-	-	-	Tafi	Avatime-Nyangbo	SE Ghana
				Aja	Gbe	SE Benin
				Akebu	Kebu-Animere	Central Togo
				Igo	Kposo-Ahlo-Bowili	Central Togo
				Ikposo	Kposo-Ahlo-Bowili	Central Togo
				Ga	Ga-Dangme	SE Ghana
				Lelemi	Lelemi-Likpe	SE Ghana
				Anufo	Central Tano > Bia	NW Ghana
				Gonja	Guang > South Guang	Central Ghana
				Nawuri	Guang > South Guang	Western Ghana
+	+	-	-	Logba	Logba	SE Ghana
+	+	+	-	Ewe	Gbe	SE Ghana
				Fon	Gbe	Central Benin
				Gen	Gbe	SE coast of Togo
				Tuwuli	Kposo-Ahlo-Bowili	Western Ghana

Instrumental take-SVCs

Uses of instrumental take SVCs				Language	Genetic affiliation	(Main) area
instrument	manner	consumable	comitative			
+	+	-	+	Abé	Abé	SW Côte d'Ivoire
				Anyin	Central Tano > Bia	Western and SW Côte d'Ivoire
+	+	+	+	Akan	Central Tano > Akan	Central, Southern, and SE Ghana
+	-	-	+	Attié	Attié	SW Côte d'Ivoire
				Baule	Central Tano > Bia	SW Côte d'Ivoire

Instrumental take-SVCs

instrument manner consumable comitative

+	+	-	+	Abé	Abé	SW Côte d'Ivoire Western and SW Côte d'Ivoire
				Anyin	Central Tano > Bia	
+	-	-	+	Attié	Attié	SW Côte d'Ivoire SW Côte d'Ivoire
				Baule	Central Tano > Bia	

Instrumental take-SVCs

- instrument < manner < consumable
- instrument < comitative
 - comitative develops independently from manner and consumable
- Both paths of semantic development seem to be universal
- Still, areal pattern is clear in the comitative use for most 4 languages of 5 instrumental take-SVCs

Objectal take-SVCs

(Theme or Patient of the lexical verb)

- Ditransitive lexical verb

Anyin

ɔ̀-fà *í-sá* *klè* *dòkté* *sũlã*

3SG-take.HAB 3SG-hand show.HAB doctor man

‘He shows his hand to the doctor.’ (Van Leynseele 1975: 205)

- Lexical verb with a locative valency

Logba

a-mi *u-kplɔ-tsuziva* *zi* *u-kplɔ-a* *tsu*

3PL-take CL-table-cloth cover CL-table-DEF on

‘They lay the table cloth on the table.’ (Dorvlo 2007: 6)

Objectal take-SVCs

- Agentive monotransitive lexical verb

Nawuri

è tá kálá bòn

3SG take shirt close

‘He fastened (his) shirt.’ (Sherwood 1982: 225)

- Volitive non-agentive monotransitive lexical verb

Fon

Kòkú sọ tú ó hèn

Koku take gun DEF hold

‘Koku holded the gun.’ (da Cruz 1992: 122)

Objectal take-SVCs

- Non-volitive monotransitive lexical verb

Gen

Ayí sɔ́ Kofí dī

Ayi take Kofi resemble

‘Ayi resembled Kofi.’ (Lewis 1992: 143)

Objectal take-SVCs

Uses of objectal take SVCs					Language	Genetic affiliation	(Main) area
ditr.	locat.	agent.telic monotr.	volit. monotr.	other monotr.			
+	-	-	-	-	Abé	Abé	SW Côte d'Ivoire
					Ga	Ga-Dangme	SE Ghana
					Nzema	Central Tano > Bia	SW coast of Ghana
+	+	-	-	-	Akan	Central Tano > Akan	Central, Southern, and SE Ghana
					Anufo	Central Tano > Bia	NW Ghana
					Chumburung	Guang > North Guang	Western Ghana

Uses of objectal take SVCs					Language	Genetic affiliation	(Main) area
ditr.	locat.	agent.telic monotr.	volit. monotr.	other monotr.			
+	+	+	-	-	Avatime	Avatime- Nyangbo	SE Ghana
					Tafi	Avatime- Nyangbo	SE Ghana
					Tuwuli	Kposo-Ahlo- Bowili	Western Ghana
					Attié	Attié	SW Côte d'Ivoire
					Lelemi	Lelemi-Likpe	SE Ghana
					Logba	Logba	SE Ghana
					Anyin	Central Tano > Bia	West and SW Côte d'Ivoire
					Baule	Central Tano > Bia	SW Côte d'Ivoire
					Gonja	Guang > South Guang	Central Ghana
					Nawuri	Guang > South Guang	Western Ghana
+	+	+	+	-	Fon	Gbe	Central Benin
+	+	+	+	+	Ewe	Gbe	SE Ghana
					Gen	Gbe	SE coast of Togo
					Akebu	Kebu-Animere	Central Togo
					Ikposo	Kposo-Ahlo- Bowili	Central Togo

Objectal take-SVCs

- Genealogical and areal factors maybe influence, but only partially
 - Crucial differences between closely related languages
- Typological diversity
- Attested options form a hierarchy

Objectal take-SVCs

ditransitives

< locatives

< agentive telic monotransitives

< volitive monotransitives

< other monotransitives

- Where the hierarchy does come from?

Objectal take-SVCs

Factors triggering the hierarchy:

- Basic grammaticalization metaphor related to the lexical meaning of ‘take’
 - agentive verbs are closer to the meaning of manual manipulation
- Distinctiveness
 - ditransitives are neutral, locative are sometimes neutral
- Transitivity in the sense of (Hopper & Thompson 1980)
 - the more semantically transitive is the verb, the more relevant is marking its object

Concluding remarks

The case study shows that

- “Maximum coverage” sample works
- Squeezing out everything you can from the existing data on the linguistic family is possible
- One can distinguish between inheritance, contact influence and independent evolution
 - At least tentatively, even based on existing classification and existing geographic data
- One can connect family-specific results of an intragenetic cross-linguistic study with a general perspective
 - At least tentatively

What next to this case study

- Studying the same parameters in other genealogical unities
- Testing the expectation that what is based on universal patterns, also works
 - E.g. preliminary study of take-SVCs also in Gur and Benue-Congo (including “Old Kwa”)
- Testing the expectation that what is based on family-specific patterns, would differ

Intragenetic typology

- Combining typological tradition and traditions dealing with specific language families happens anyway
 - A tendency existing in all research communities
- Conceptualizing traditional comparison of related languages as a part of linguistic typology helps both
- A way of real introducing of linguistic diversity into linguistic typology

If interested for details
